

PEAK PERFORMANCE 2® with LUTISPORT™

All-In-One Bodybuilder and Health Nutrition Supplement. PEAK Performance 2® with LUTISPORT™ is the 100% Natural Dog Nutrition Supplement for Health, Performance and Stress in Athletes, Working and Active Dogs

"The Only Choice When Performance Counts"

Human performance has been transformed to almost unimaginable levels, but it is not the result of greatly improved genetics. Instead, as in dogs, performance leaps of this magnitude result from scientific health nutrition and conditioning. Getting more out of athletes, without performance enhancing drugs.

The predigested calories used in PEAK Performance 2® with LUTISPORT™ nutrition supplement is gentle enough for premature infants, yet also power today's Olympic athletes. Predigested calories are even more effective on dogs. They recreate predigested foods dogs get from stomach contents and meat in wild game. Predigested calories are research-proven to be the most efficient food energy available. Already digested, utilization is near 100% - hyper digestible.

Packed with whole roasted chicken, beef, eggs and other canine proteins, amino acids and nutraceuticals, PEAK Performance 2® with LUTISPORT™ works in powerful ways to assist in muscle growth, boost immunity and enhance strength, endurance and recovery.

Sizes: 1½ , 4 and 8 pound containers.

Non-Toxic Vitamin Levels

APRL uses strategic vitamin levels, so taking too much is almost impossible.

Real Meat Protein

And they're 100% human-grade quality meats for more protein benefits and taste.

Building Block Amino Acids

APRL uses costly amino acids - essential aminos; branched chain aminos; gluconeogenic aminos; anti-stress aminos for improved endurance, recovery and metabolic optimization. Now even Creatine and Ribose for more muscle energy.

Proven Anti-Stress Factors

Exciting new research gives us potent all-natural nutrients that help reverse muscle break-down, buffer toxic stress effects, boosts immunity and even fight infection! PEAK Performance2® with LUTISPORT™ has Creatine, Glutamine and other natural power houses!

Bio-Balanced Fats

New "designer lipids" to make fat more than just energy. No excessive omega 6's, a promoter of joint and skin inflammation, tumor growth, etc. APRL fats are human grade.

Lactic Acid Buffers

Lactic acid is a primary fatigue factor in many canine activities. APRL uses an advanced lactic acid buffering matrix. Effective and safe lactic acid neutralizers, meaning more endurance, power and recovery.

Detoxify Ammonia

Ammonia is a toxic by-product of intense exercise, which can limit performance by causing fatigue. APRL uses nutrients medically proven to reduce ammonia levels.

Replace Lost Wild Factors

APRL uses a complete array of "lost" nutrients including enzymes, probiotics and FOS.

Lab Tested

APRL products are pure and safe. Every raw ingredient is lab tested safe. Plus, every batch is tested by a respected food lab.

The "All-In-One" Canine Bodybuilder is Not Just for Athletes

PEAK Performance 2® with LUTISPORT™ enables dogs to reach new levels of muscular performance and health. This formula includes power proteins, 25% more amino acids, D-Ribose and glycerol. PEAK Performance 2® with LUTISPORT™ can supercharge any dog food in four dynamic ways:

Muscle Up Any Dog

Convert calories into lean muscle mass, assist in healthy muscle growth, pack on healthy and functional weight, even on "hard gainers" and finicky eaters. Promote anabolic metabolism leading to positive nitrogen balance. Increases protein synthesis leading to enhanced cellular repair and growth. **Show Ring, Hard Keepers, Police, Athletes, Muscular Breeds.**

Performance Booster

Enhance strength and endurance, muscle mass and definition, reduce fatigue, fuel fast and slow twitch muscle fibers, reduce lactic acid, optimize fat use, accelerate recovery and recuperation, less soreness and muscle damage, sharpen concentration. **Athletes, Schutzhund, Police K-9, Agility, Sled, Hunting, Weight Pulling.**

Stress Reliever

Naturally reduce toxic by-products of stress. Reduce stress hormones, boost immunity and favorably influence "feel good" hormones. **Travel, Severe Temperatures, Boarding.**

Medical Treatment Recovery

Predigested nutrients enhance tissue repair, boost immune system, fight infection, reduce inflammation and promote positive nitrogen balance. This increases protein synthesis leading to enhanced cellular repair and growth. **Surgery, Trauma, Chemotherapy**
