

PEAK WORKOUT™

The Performance Sports Drink Custom-Designed to Increase Performance and Make Physical Activity More Enjoyable for Your Dog!

"Your Dog's "Second Wind"

PEAK Workout™ is designed to increase energy and hydration better than any other product available! It's one of the first formulas given to dogs during exercise and contains nutrients that are research-proven to make your dog's workout more fun, comfortable and safe. The sports drink, also known as a "second wind for dogs", works on several levels to provide your dog with a thirst quenching, energy enhancing, re-hydrating boost during exercise.

Reduce Overheating!

Say goodbye to "Running Hot". Special gluconeogenic amino acids and other advanced fuels help to reduce temperature levels inside the body even during ultra-intense workouts. A rise of just a few degrees inside the canine body reduces performance. Plus, the hotter it is the more lactic acid formed.

Fight Stress Damage!

Exercise is healthy, but produce toxic by-products such as free radicals and toxic stress hormones. These substances, in high amounts, cause muscle breakdown, cell damage, lowered immunity and other negative effects. PEAK Workout™ helps "neutralize" these toxic by-products.

XTREME H2O

Sizes: 30 oz containers.

Fights Dehydration!

Dehydration is surprisingly common, especially in summer. Better fluid levels means better health! PEAK Workout™ contains glycerol and advanced citrate-bonded electrolytes that help increase fluid inside muscle cells. This maintains critical "coolant" levels when dogs might otherwise overheat.

Buffer Lactic Acid!

Beat the Burn! During exercise, energy reserves can run so low that your dog "bonks" - a sports term for an energy crash. PEAK Workout™ contains customized "clean burning" fuels prized for their ability to extend endurance performance. In addition, non-carbohydrate energy sources bypass acid production altogether while advanced neutralizers "soak up" excess acid. This one-two punch of inhibiting lactic acid production, then buffering more of what does form, enables your dog to work out harder and longer with less fatigue.

Boost Muscle Energy!

Ultimate high-octane fuels provide rapid, clean-burning muscle power directly to the muscles while others supply fuel to the liver for long-term energy.

Kick Start Recovery After Workouts!

After workouts, canine metabolism is in a catabolic (breakdown) state. PEAK Workout™ supplies building block nutrients to help reverse breakdown, greatly enhancing recuperation. This means your dog is more physically ready for the next workout, which is now more fun and productive.

Protect Canine Joints!

Tough exercise causes wear and tear. To strengthen your dog's shock absorbers, includes Glucosamine and collagen. These joint factors strengthen connective tissue and enhance joint elasticity and health.
